## **GM** 2014 Chevrolet Malibu (With Start / Stop Technology)

The 2014 Chevrolet Malibu with start / stop technology incorporates two 12 volt batteries that must be disconnected prior to occupant extraction.

To disable the vehicle:

- 1. Turn the ignition switch to "OFF".
- 2. Cut the black negative 12V battery cables at the starting battery under the hood and the auxiliary battery in the trunk area.
- **Note:** After disabling 12 volt power, wait 1 minute to allow any undeployed airbag reserve energy to dissipate.
